

# Telephone devices for your individual communication requirements

Swyx understands that users require the versatility of a solution that integrates a wide variety of devices. Swyx has made the choice easier by ensuring all Swyx devices are fully compatible with SwyxWare thus enabling all users to enjoy a telephony experience that is feature rich and user friendly:

**The full capability of IP telephony** can be utilized in a convenient and simultaneously cost-effective way with the combination of USB telephone and SwyxIt! Softphone. SwyxIt! handsets are simply connected to the USB port of a PC or laptop. All telephone functions are controlled via the graphic interface of the SwyxIt! application.

**The headset is the optimal solution for constant use.** With the USB headsets (headset and microphone), users can simultaneously operate the computer during a phone call. With the Swyx cordless headsets users are no longer tied to their desks but are nonetheless within reach – a truly mobile solution.

SwyxPhone L680: High specification handset with large colour display and innovative operational concept.

SwyxIt! is the flexible communication central – easy to use and optimised for all Swyx telephony devices.

**SwyxPhone devices are smart desk phones** which are directly connected by Ethernet to the local network. These telephones offer a wide functional range, e.g. function keys with LEDs, central and personal phonebooks, speed dials with display of call status, group call function or voicemail inquiry. In combination with the SwyxIt! PC telephone these devices ensure greater productivity.

**The cordless Swyx DECT-over-IP products** are the solution for staff who are frequently on the move in the office or the company premises.

**Your personal office environment.** In addition SwyxWare supports all major Smartphone platforms to allow mobile access to your personal office environment.

The intuitive Swyx interface enables that devices can be connected with ease. This ensures that the device is immediately operational once connected – administrative effort is kept to a minimum.

## Easy to use: USB Handsets

## Flexibility at your desk: Headsets

## Mobility in the office: Wireless Headsets

**SwyxIt! Handset P250**

**TPP.SWYX.COM**  
Technology Partner Programme

**3rd party manufacturer**

SwyxWare supports the connection of devices, that are using the SIP protocol.

The SIP standard offers advantages because of its openness. But today, due to several limitations of the standard, SIP based devices in general can only provide a reduced feature set. Especially compared to system phones which can be optimised for a perfect client/server communication.

Please find an overview of 3rd party SIP devices with their respective feature set in our Swyx Technology Partner Program at [TPP.SWYX.COM](http://TPP.SWYX.COM)

<sup>1</sup>HD Audio (G.722) supported with SwyxWare 2011 Version 8 <sup>2</sup>Swyx headset cable separately available <sup>3</sup>Comfort Firmware Update automatically detects SwyxPhone system phones for server based firmware deployment
